

CLAIM AMENDMENT

Please **AMEND** claims 1, 5 and 18 as follows.

31 cont.

1. (Currently Amended) A liquid crystal display comprising:
a backlight assembly having a light source ~~portion~~ that generates light;
a liquid crystal display panel that receives said light from said backlight assembly; and
displays images;
a mold frame that accepts said backlight assembly and said liquid crystal display panel;
and said mold frame formed to be gradually thinner as further advancing from a first side
adjoining said light source ~~portion~~ toward a second side ~~facing~~ opposite said first side; and
a chassis coupled to said mold frame to fix said backlight assembly and said liquid crystal
display panel therebetween; and formed to be gradually thinner as further advancing from a first
side adjoining said light source ~~portion~~ toward a second side ~~facing~~ opposite said first side.

2-4. (Withdrawn by the Examiner)

5. (Currently Amended) An information processing apparatus comprising:
a liquid crystal display module including:
a backlight assembly having a light source ~~portion~~ that generates light;
a liquid crystal display panel that has a source printed circuit board attached
thereto to transmit signals and receives said light from said backlight assembly to display
images;

a mold frame that accepts said backlight assembly and said liquid crystal display panel; and formed to be gradually thinner as further advancing from a first side adjoining said light source ~~portion~~ toward a second side ~~facing~~ opposite said first side; and

a chassis coupled to said mold frame to fix said backlight assembly and said liquid crystal display panel; and formed to be gradually thinner as further advancing from a first side adjoining said light source ~~portion~~ toward a second side ~~facing~~ opposite said first side; and

an information processing module that has a liquid crystal display panel driving circuit to generate a driving signal and supplies said driving signal to said liquid crystal display panel via said source printed circuit board.

6-8. (Withdrawn)

9. (Previously Amended) The information processing apparatus as claimed in claim

5, wherein said information processing module further comprises:

a central processing unit that generates control signals;

data storage that stores or supplies data in response to said control signals from said central processing unit; and

a signal processing unit that processes video data in response to said control signals from said central processing unit to provide the video data to said liquid crystal display panel driving circuit.

10. (Previously Amended) The information processing apparatus as claimed in claim 9, wherein said information processing module is attached on a rear plane of said mold frame.

11. (Previously Amended) The information processing apparatus as claimed in claim 10, wherein said liquid crystal display module and said information processing module are fixed together between a front case and a rear case coupled to each other.

12. (Previously Amended) The information processing apparatus as claimed in claim 9, wherein said data storage comprises at least one selected from the group consisting of ROM, RAM, a hard disc drive and an optical disc.

13. (Previously Amended) The information processing apparatus as claimed in claim 9, wherein said information processing module further comprises:

 an interfacing unit that interfaces data with an external information processing unit;
a sound control unit that plays and records sound; and
a communicating unit that performs communication with an external device.

14-17. (Withdrawn)

18. (Currently Amended) An information processing apparatus comprising:
a liquid crystal display module including:
a backlight assembly having a light source ~~portion~~ for generating light;

a liquid crystal display panel that has a source printed circuit board attached thereto to transmit signals, and receives said light from said backlight assembly to display images;

a mold frame that accepts said backlight assembly and said liquid crystal display panel; and

a chassis coupled to said mold frame to fix said backlight assembly and said liquid crystal display panel; and

an information processing module directly attached on a rear plane of said mold frame and having a liquid crystal display panel driving circuit to generate a driving signal and supplying said driving signal to said liquid crystal display panel via said source printed circuit board.

19. (Previously Added) The information processing apparatus as claimed in claim 18,

wherein said liquid crystal display module and said information processing module are fixed together between a front case and a rear case coupled to each other.

20. (Previously Added) The information processing apparatus as claimed in claim 18,

wherein said information processing module further comprises:

a central processing unit that generates control signals;

data storage that stores and supplies data in response to said control signals from said central processing unit; and

a signal processing unit that processes video data in response to said control signals from said central processing unit to provide the video data to said liquid crystal display panel driving circuit.

21. (Previously Added) The information processing apparatus as claimed in claim 20, wherein said data storage comprises at least one selected from the group consisting of ROM, RAM, a hard disc drive and an optical disc.

22. (Previously Added) The information processing apparatus as claimed in claim 20, wherein said information processing module further comprises:

an interfacing unit that interfaces data with an external information processing unit;

a sound control unit that plays and records sound; and

a communicating unit that performs communication with an external device.
